

Download **Week_1_ML.ipynb** from SurreyLearn to your local computer.

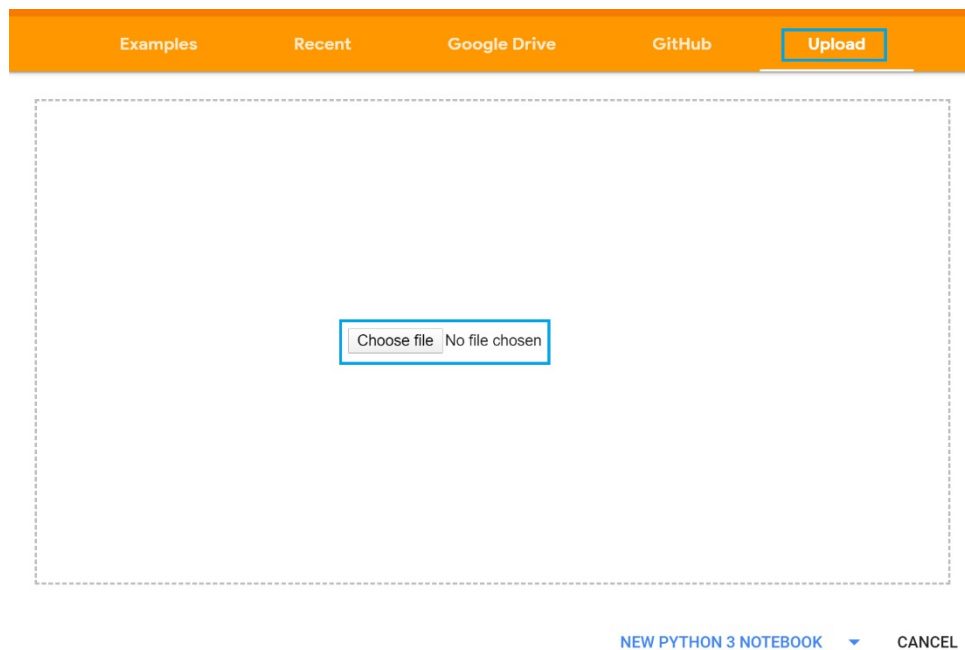

We are going to use **Google Colab** for our lab exercises. Here is a quick intro for it,

<https://www.youtube.com/watch?v=inN8seMm7UI>

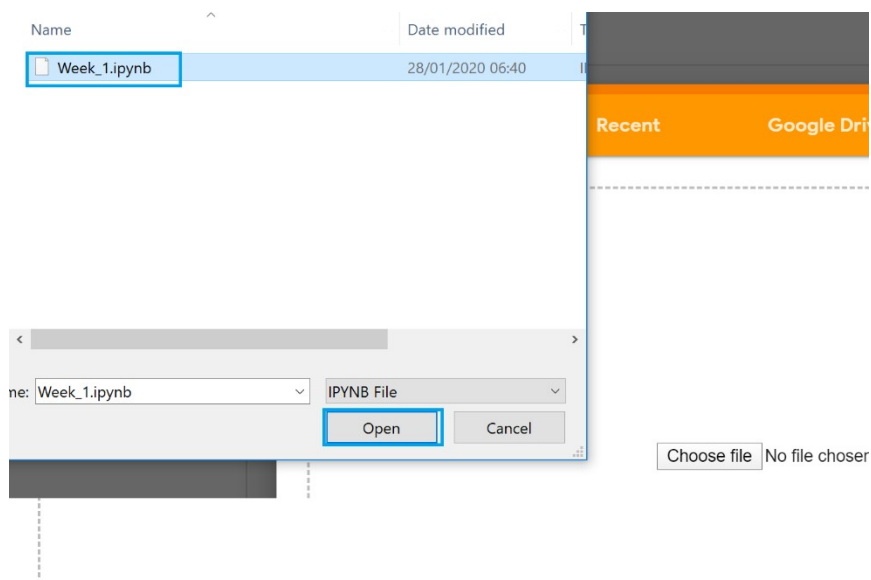

First, you need to create a Google/Gmail account if you don't have one.

Then, open <https://colab.research.google.com/> using **Google Chrome**.

Click **Upload** and then click **Choose file**.

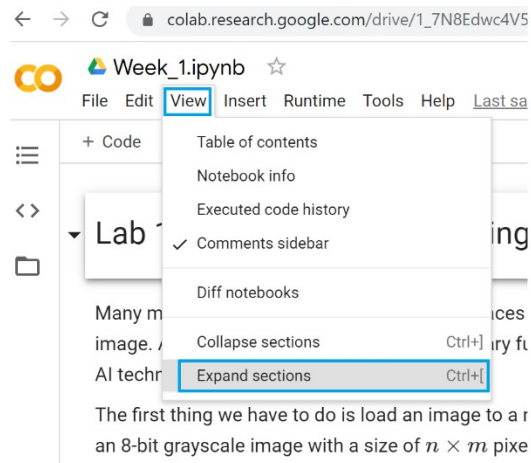

Find your local **jupyter notebook** (ending with **.ipynb**) and upload it.

When uploading completed, the notebook would **automatically** open.

Click **View** then **Expand sections** so you can see the whole notebook.

Now you can go through all cells (snippets of code) **from the beginning**.

Select one cell and press **Ctrl + Enter** to execute it or click the  button.
